

Career Opportunities - Willowglen is Hiring

Willowglen Systems is an innovative Supervisory Control and Data Acquisition (SCADA) technology company, celebrating its 40th anniversary and recognized for our excellence in Customer Service. Headquartered in Alberta, our main products are SCADA host, Flow Computer, and RTU systems - which we develop and support through our team of software developers, hardware engineers, and project management personnel.

With our original product brands (DATEK, SCANTRACK, and VISTA-II), through to today's next generation technologies (Unisen, SCADACOM, and Sentient Power) - Willowglen is recognized as a provider of advanced and innovative industrial automation solutions.

Willowglen has a global customer base and chiefly serves the oil and gas, pipelines, water and electricity distribution, and transportation system industries - in locations across North America, Asia and Europe.

Due to new projects and product development initiatives, we are pleased to have the following opportunities available at our Edmonton office - at junior, intermediate, and senior levels:

Project Manager – SCADA Projects, Flow Computer Projects

We are currently looking for Project Managers who have Systems Integration and Field experience with SCADA host and/or Flow Computer Systems.

Software Developer - SCADA Control Systems

The scope of software design varies from graphical user interfaces on large scale servers to low-level embedded software on Willowglen hardware devices.

Preferred candidates will have an engineering or industrial automation background.

Hardware Engineer and Developer - SCADA Control Systems

Microcontroller hardware and software development

Please send resumes to: careers@willowglensystems.com at your earliest opportunity.
