

Using WirelessHART Communication in Process Industries

Educational Technology Seminar for Users Presented by the HART Communication Foundation

This seminar describes how users' requirements are implemented in WirelessHART technology, the first open interoperable wireless communication standard for the process industries (IEC 62591 Ed. 1.0).

Learn how this simple, reliable and secure technology can complement your process monitoring, control and asset management applications.

Vendor-neutral, one-day seminar presented free of charge includes live demonstrations of WirelessHART Communication

Dates and Locations

September 13, 2010 - Calgary, Canada

September 15, 2010 - Edmonton, Canada

Topics include

- Understanding WirelessHART technology
- Using WirelessHART technology
- Planning a WirelessHART Project
- Live WirelessHART demonstrations

Who should attend

- Automation professionals interested in using WirelessHART technology in their industrial process and factory applications
- Engineering Contractors who are designing plants, facility upgrades and process applications
- Engineers and plant technicians involved in instrumentation, maintenance, asset management, advanced device diagnostics and commissioning

Register Now! There is No Charge for this Seminar, but Attendance is Limited.
